About Carol

Carol Boston-Fleischauer serves as a global spokesperson for the Advisory Board's research at key membership forums, including those focused on clinical and operational leadership, human resources, and quality. She is also responsible for presenting this research to member organizations throughout the United States and abroad.

Carol has over 30 years of progressive health care experience in patient care practice, operations, management, education, and consultation in academic medical centers, community hospitals and clinics, multi-hospital organizations, and integrated health care systems.

Her most recent leadership position prior to joining the Advisory Board was that of systems director, quality improvement, for a multi-hospital system in the Pacific Northwest. Other prior positions have included senior leadership roles for various health care consulting firms and executive director of the American Organization of Nurse Executives, a subsidiary of the American Hospital Association. Carol's areas of expertise include clinical operations and care model redesign, quality improvement, human resources, and strategic planning.

Carol holds bachelor's and master's degrees in Nursing from Northern Illinois University and a juris doctorate from John Marshall Law School. She has advanced education and development in quality improvement methods and theories through Intermountain Health Care and the Institute for Healthcare Improvement.

Disruptive Innovation

The impact of technology on advancing healthcare delivery.

“

Motivating! I am rejuvenated and want to rush back to work and improve patient care! One of the finest presentations I have heard in 30 years of nursing. Thank you.

- 2017 BANYAN Summit Attendee

”

- 2017 Care Innovation Summit

BANYAN is Leading the Care Conversation

Learn what The Advisory Board and other healthcare leaders have to say about transforming the healthcare system and how we need to transform care now for a sustainable future. CNO's at leading healthcare organizations will share their innovations and best practices with results.

About BANYAN

The first innovative BANYAN solution was an FDA-registered integrated display platform to help physicians in Operating Rooms and Labs quickly and efficiently access data. It streamlined many systems into one display and enabled clinicians to access, collaborate and share information about patients, all on the same monitor, locally and virtually.

Since then, BANYAN has developed additional intelligent platforms for patient rooms, nursing stations and fall prevention monitoring rooms. They enable the entire care team, in any setting (from hospital to pharmacy to home), to coordinate patient care, as well as monitor, inform, and educate patients and their loved ones.

Our team of expert clinical consultants work with our clients to help to design, implement and manage innovative solutions that transform care delivery models. Over 36% of the largest healthcare systems in the United States agree with us and have BANYAN solutions in their operating rooms, labs, and patient rooms.

*We'd Love to
Show You How.*
