

# AURA Fall Prevention and Sitter Solution

Fall Prevention is a National Patient Safety Goal. Patient falls with injury can be a serious reportable Sentinel Event. Falls can result in lacerations, fractures and even death. Preventing falls in high risk populations requires careful assessment and care planning for each patient.

AURA Fall Prevention prevents falls and fall-related injuries and significantly reduces costs with 24/7 in-room monitoring. Easy to implement, AURA utilizes a centralized, virtual, patient monitoring system. With AURA Fall Prevention, hospitals of any size can experience dramatic results:

- ✓ Peace of mind for patients and their families
- ✓ Improved staff utilization
- ✓ Decreased falls and falls with injury resulting in improved quality and reduced cost
- ✓ Reduced annual physical sitter cost
- ✓ Lower cost-per-patient per hour watched

## How it works

### 1. Patient Room

Rooms are set up with a camera and two-way audio communication ensuring patients are visually monitored and verbally re-directed as needed.

### 2. AURA Monitoring Station

The monitoring station can either be in the hospital or remotely by BANYAN at our secure Sync Office depending on your facility's needs.

### 3. AURA Sitter

Provided by BANYAN or managed by your team, the virtual sitter has the ability to monitor multiple fall-risk patients based on acuity. With AURA Sitter, someone can promptly talk to the patient or respond with a care team member for assistance.

### 4. Implementation Services

AURA Fall Prevention and Sitter Solutions are easily implemented and are appropriate for hospitals of all sizes. When you choose AURA, we will be with you every step of the way.
